

LAB 1 – REQUIREMENTS TABLE

Student Startup Crowdfunding Platform

Username / USN	PES1UG24CS704
Student Name	Shreyas Gowda
Problem Statement	Problem Statement #40 – Student Startup Crowdfunding Platform

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall collect backer pledges and disburse funds to the student venture in tranches only upon verification of predetermined project milestones.	High	Pass: Milestone evidence is reviewed and the appropriate tranche is released. Fail: Campaign funds are disbursed without milestone sign-off.	Ensures funds are released only when project milestones are verified.
FR-002	Functional	The system shall allow a Student Founder to create and publish a crowdfunding campaign with a funding target, project description, milestones and reward tiers.	High	Pass: A campaign is published only when all mandatory campaign details, at least one milestone and one reward tier are provided. Fail: A campaign is published with missing mandatory information.	Provides founders with the core functionality to raise funds for their ventures.
FR-003	Functional	The system shall allow a Campaign Backer to select a reward tier when making a pledge to a campaign.	High	Pass: The selected reward tier is displayed with the pledge before payment confirmation. Fail: A pledge is confirmed without displaying the selected reward tier.	Supports the reward-tier selection functionality described in the scenario.
FR-004	Functional	The system shall allow the Faculty Committee to review submitted milestone evidence and approve or reject a milestone.	High	Pass: The system records the committee's approval or rejection decision and timestamp. Fail: A milestone status changes without a recorded committee decision.	Provides the faculty verification required before milestone-based fund releases.
FR-005	Functional	The system shall allow Student Founders and Campaign Backers to view campaign funding progress and milestone status.	Medium	Pass: The system displays the current pledged amount, funding target and status of each milestone. Fail: Any required progress detail is unavailable.	Provides transparency about campaign progress and milestone status.
FR-001	Non-Functional – Performance & Security	The payment processing gateway shall comply with PCI-DSS guidelines and use tokenized payment authorizations.	High	Pass: Security testing confirms PCI-DSS compliance and payment authorization uses tokens instead of storing raw card details. Fail: Raw card details are stored or required security standards are not met.	Protects backers' payment information and reduces payment security risks.
FR-002	Non-Functional – Availability	The system shall maintain at least 99% monthly availability, excluding scheduled maintenance.	Medium	Pass: Monthly monitoring shows availability of at least 99%. Fail: Availability falls below 99%.	Ensures founders and backers can reliably access campaigns and funding information.
